U.S. Global Jets UCITS ETF - Acc

Factsheet | Data as of 30 Sep 2021

Investment Objective

The U.S. Global Jets UCITS ETF 'JETS' delivers exposure to the global airline industry including airline operators and manufacturers from all over the world. The JETS Airline ETF tracks the U.S. Global Jets Index and tracks companies within the commercial airline, aircraft manufacturing, and airport & terminal services industries. The index uses a combination of fundamental factors to determine the most efficient airline companies and provides diversification through exposure to companies around the world listed on well developed stock exchanges. Please remember that the value of your investment may go down as well as up and past performance is no indication of future performance.

Why JETS?

Smart beta exposure to the airlines industry

The JETS airline ETF uses a smart-beta 2.0 strategy to determine the most efficient airline carriers in the world and provides diversification through exposure to international airline companies.

Broader exposure to the wider airline industry

The JETS Airline ETF also offers exposure to the industries that support airlines, including aircraft manufacturers, airports, and terminal service industries.

A post-pandemic recovery opportunity

Pre-COVID, the airline industry was booming as carriers streamlined operations, improved their balance sheets, and managed to grow profits by introducing more ancillary (non-ticket) fees. The coronavirus disrupted the industry tremendously, but as vaccinations start ramping up around the world and the global economy re-opens, investors are now presented with a potential opportunity to access the recovery story.

Key Risks

1. The value of underlying securities can be affected by daily financial market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
2. Airline Companies Risk: Airline Companies may be adversely affected by a downturn in economic conditions that can result in decreased demand for air travel and may also be significantly affected by fuel prices.
3. Please remember that the value of your investment may go down as well as up and your capital is at risk. Please see KIID for full details.

Performance before inception is based on back tested data. Back testing is the process of evaluating an investment strategy by applying it to historical data to simulate what the performance of that strategy would have been. Back tested data does not represent actual performance and should not be interpreted as an indication of actual or future performance. Past performance for the index is in USD and shown net of fees. Past performance and back tested index performance is not an indicator for future results and should not be the sole factor of consideration when selecting a product. It is provided for illustrative purposes only. Indices cannot be invested in directly. Investors should read the prospectus of the Issuer ("Prospectus") before investing and should refer to the section of the Prospectus entitled 'Risk Factors' for further details of risks associated with an investment in this product.
