*Past performance is not indicative of future returns. Total Return NAV is calculated based on re-investing dividend at the net asset value on the ex-dividend date. The ex-dividend date is the day on which all shares bought and sold no longer come attached with the right to be paid the most recently declared dividend. For distributing shares, investors will note a reduction in the net asset value of the Fund on the ex-dividend date. For accumulating shares, investors will not notice any such reduction as the dividends are simple re-invested.

**Where the fund has insufficient trading history simulated back tested performance data has been used. Any historical performance included on this document represents actual index or back tested performance data. Back testing is the process of evaluating an investment strategy by applying it to historical data to simulate what the performance of such strategy would have been. Back tested performance is purely hypothetical and is provided on this document solely for informational purposes. Back tested data does not represent actual performance and should not be interpreted as an indication of actual or future performance. The value of any investment may be affected by exchange rate movements.

The price of any shares may go up or down and an investor may not get back the amount invested. Past performance is not a reliable indicator of future performance.
