

The Royal Mint Physical Gold ETC (RMAU) - UCITS Eligibility

This note explains why The Royal Mint Physical Gold ETC (RMAU) is UCITS eligible. This note is not legal advice and should be used for guidance purposes only.

What is it: A Transferable Security

RMAU is an exchanged traded commodity “ETC” that meets the definition of a Transferable Security under the UCITS Directive as ETCs are “debt instruments traded on a regulated market”. RMAU is listed on the Official List of the London Stock Exchange and on certain other European Exchanges. An investment in RMAU is not a direct investment in gold but in a note that is physically backed by gold and is therefore UCITS eligible.

Protection Mechanism Against Physical Settlement for UCITS

A UCITS cannot purchase gold directly. RMAU carries a right to redemption by the delivery of gold from the Issuer and any eligible investor may redeem ETCs in exchange for gold directly with the Issuer. However, the Issuer has the absolute discretion to reject a physical redemption order and will screen out Prohibited Metal Holders.

UCITS schemes are deemed Prohibited Metal Holders. In the event a UCITS elects to redeem their RMAU in exchange for gold, they will need to complete a redemption form and KYC. At this stage, it will become obvious that the security holder trying to redeem is a UCITS and the redemption form will not be validated. A UCITS must always sell their ETCs on an exchange, via their broker, or to an Authorised Participant.

Subscriptions by Authorised Participants

Only Authorised Participants (“APs”) are able to subscribe for RMAU securities directly with the Issuer in the primary market. APs deliver gold to the Issuer. APs may then sell their ETCs on the secondary market or hold them.

Purchase and Sale on Exchange

RMAU can be bought and sold on the secondary market by investors like other shares or ETFs.

Agreements are in place between the Issuer and several APs, who invest directly in gold and deliver to the Issuer. APs facilitate the accurate pricing and liquidity of RMAU. Market makers commit to the Issuer to provide liquidity on exchange.

What it is Not: A Financial Instrument Embedding a Derivative

An ETC should not be mistakenly characterised as a “financial instrument embedding derivatives with delivery mechanisms transferring commodities”. Firstly, there is no derivative instrument in the structure and secondly, RMAU is secured 100% by physical gold.
